

Abstract of the Disclosure:

A sheet-processing machine includes a revolving sheet holding device for aiding in transporting sheets to be processed. A device for producing suction air or air blast has a movable
5 air delivery element accommodated on the revolving sheet holding device. An actuating element cooperatively engages with the air delivery element for driving the air delivery element. The actuating element is either fixed to a frame of the machine or is movable relative to the sheet holding
10 device.
